

Research to Risk Assessment (R2RA): Research Project Screening Criteria

The following draft criteria were developed by the Superfund Research Program as a starting point for screening the SRP research portfolio for the more promising candidates for the Research to Risk Assessment project:

- SRP Research would be viewed as advancement of risk assessment practice, and/or
- Research matches up with risk assessor needs, and/or
- SRP research appears to be ready for site application, and/or
- SRP Researcher has done work at SF sites, and/or
- Research appears to be more broadly applicable to other sites through incorporation in guidance, etc., and/or
- Application to superfund site(s) fits the research design, and/or
- Researcher is interested in pursuing research application, and/or
- Results could be published in a peer reviewed journal article
